

Tech Help

Applications: Select vehicles using a stub-shaft

GSP Part Numbers: NCV10566, NCV10577, NCV10585, NCV64508

The above GSP part numbers are produced with a female inboard joint. Before installation the installer must remove the stub shaft from the inboard joint of the original axle and put it in the female end of the new GSP axle. Depending on how the original axle is removed, the stub shaft will either remain on the axle or stay in the transmission. Refer to the illustration below as an example of a stub shaft.
